Investment News From a Pro-Shareholder Perspective

August 6, 2024

This Week: Strive CEO talks to Fox Business; State pension funds divesting from China; An Eye on Energy discusses carbon capture.

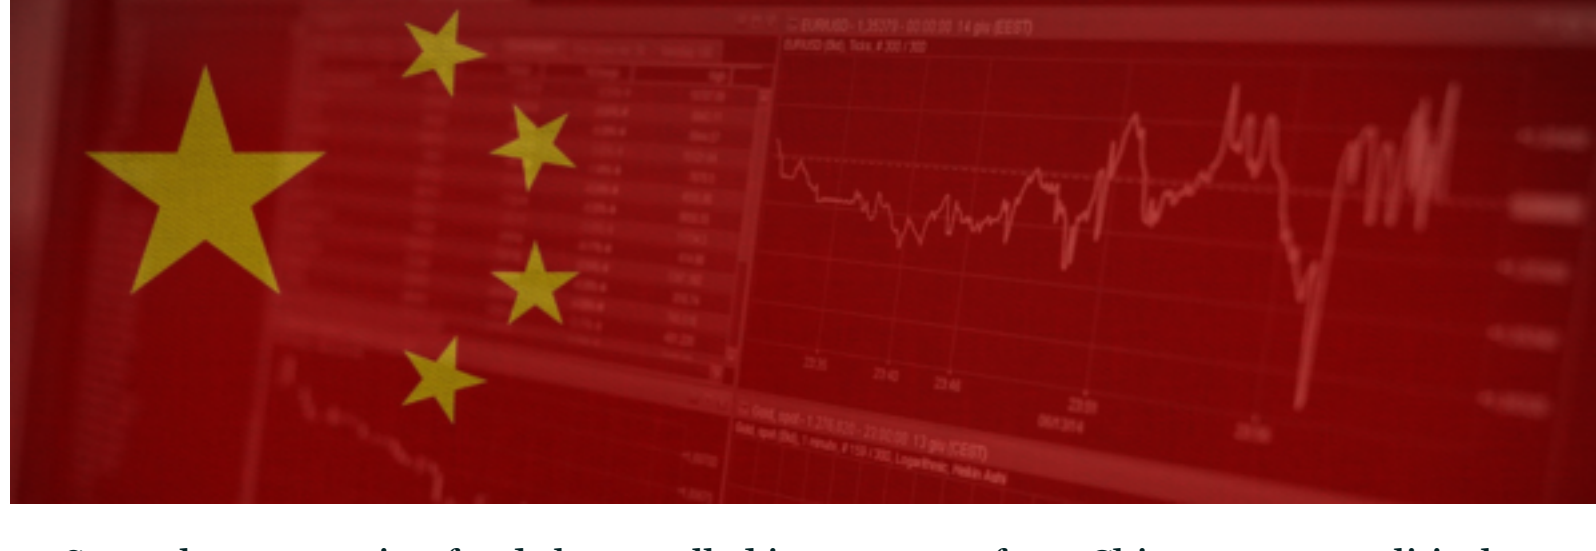

Strive CEO Matt Cole Makes Fox Business Appearance

Last week, Strive CEO Matt Cole appeared on Fox Business's *Mornings with Maria* to discuss the market news of the day, our recent Series B close, and how our mission resonates with investors. "What investors care about is making money, at the end of the day. Forget the woke stuff. Forget the ESG stuff. Forget the DEI stuff," he explained. "[Investors] want excellence. They want innovation. They want meritocracy. They want capitalism."

View his interview [here](#).

State Pension Funds Divesting from China

Several state pension funds have pulled investments from China over geopolitical risks in the past year, [Politico](#) reports.

The States: In the past year, Indiana, Florida, Missouri, Kansas, and Oklahoma have announced new policies divesting from China. They join the [Texas Teacher Retirement System](#) and [Pennsylvania Treasury](#), which both announced cuts in 2022, and the [Federal Thrift Savings Plan](#), whose board unanimously voted to exclude China from its international benchmark in November.

State Pensions Divesting From China

Source: Strive Asset Management; data sources <https://www.politico.com/news/2024/07/26/state-pensions-2024/> and <https://www.reuters.com/world/us/texas-teachers-pension-cut-china-target-allocation-2022-03-14/>

What They're Saying:

- **Florida** cited concerns about "invest[ing] into a country that's not being totally transparent or hasn't the best interests of Floridians at heart."
- **Oklahoma** wants "to protect taxpayer assets by ordering the development of divestment plans for those assets deemed at risk of compromise in the event of an Indo-Pacific conflict."
- **Missouri** sees divestment as "a defensive measure," particularly if China invades Taiwan.
- **Kansas** also cited the risk of a conflict with Taiwan.
- **Indiana** seeks "to stand against the Communist Chinese Party and all the threats they pose to our nation."

China Risk Is Investment Risk: Strive recognizes that China risk is investment risk—albeit one that often flies under the radar. As geopolitical tensions rise, and China's economic woes persist, we believe these risks will continue to mount.

Midcap Stocks Feeling ESG Pressure

ESG proponents set their sights on midcap stocks this proxy voting season, following years of pressuring America's largest companies to adopt their preferred social goals.

ESG At Large: In the past several years, ESG proponents have had overwhelming success in pressuring America's largest companies to adopt net zero goals, diversity targets, and more. Now, proponents have moved on to the next frontier: the next band of mid-sized publicly-traded companies, aka, midcaps.

The Tactic: ESG proponents often cite what large cap companies are doing as "best practices" that the midcaps should aspire to.

The Prey: Among the targeted midcap companies this year are:

- [Winston](#), which faced a proposal to force the company to disclose its greenhouse gas emissions. The proposal managed to garner 52% support, despite management's opposition, in part because the activist argued that McDonald's and Taco Bell had already agreed to such disclosures.
- [Dick's Sporting Goods](#), which opposed a proposal to release more diversity data to "bring DSG into line with virtually all S&P 100 companies," which all release detailed breakdowns of their employees by race and gender. Notably, the proponent relied on the now-[debunked](#) McKinsey report that claimed that diversity leads to greater returns; more recent [research](#) has put that myth to rest.
- [Paramount Global](#), which faced a proposal asking the company to adopt and publicly release an artificial intelligence code of ethics.

The Concern: Midcap companies may be particularly vulnerable to the costs of ESG activism, as they don't have huge balance sheets that can absorb these wasteful costs as easily as some of their large-cap counterparts. While no company should be forced to pay an "ESG tax," smaller and mid-sized businesses may stand to suffer most.

U.S. Lawmakers Open Probe Into ESG Investors

Last week, the U.S. House Committee on the Judiciary demanded information and documents from more than 130 investors over their alleged collusion to force companies to adopt ESG goals and fight climate change, [Reuters](#) reports.

The Concern: In the demand [letter](#), lawmakers cited concerns over their potential "collu[sion] with climate activists through initiatives like Climate Action 100+ to adopt left-wing environmental, social, and governance (ESG)-related goals, potentially in violation of U.S. antitrust law."

The Ask: Lawmakers seek information on the tactics the group is using to force companies to "[t]ake action to reduce greenhouse gas emissions across the[ir] value chain[s]."

The Targets: The letter was sent to more than 130 U.S.-based asset managers, wealth managers, retirement systems, and state pension funds, including:

- Goldman Sachs Asset Management
- Franklin Templeton Investments
- Breckinridge Capital Advisors
- California State Teachers' Retirement System, and
- New York State Common Retirement Fund

Why It Matters: Lawmakers are concerned because the alleged collusion could violate U.S. antitrust laws, as some [officials](#) have argued. As Federal Trade Commission Chair Lisa Kahn has [explained](#), "ESG won't stop the FTC" because "[t]he antitrust laws don't permit us to turn a blind eye to an illegal deal just because the parties commit to some unrelated social benefit." But investors are monitoring the situation as well, particularly since ESG activism has been [linked](#) to lower returns.

The Carbon Capture Conundrum

Conversations about carbon capture are likely to increase significantly over the next year. Almost [half](#) of clean energy investments by the oil and natural gas industry in 2023 involved the merger and acquisition of energy companies focusing on Carbon Capture, Utilization, and Storage (CCUS).

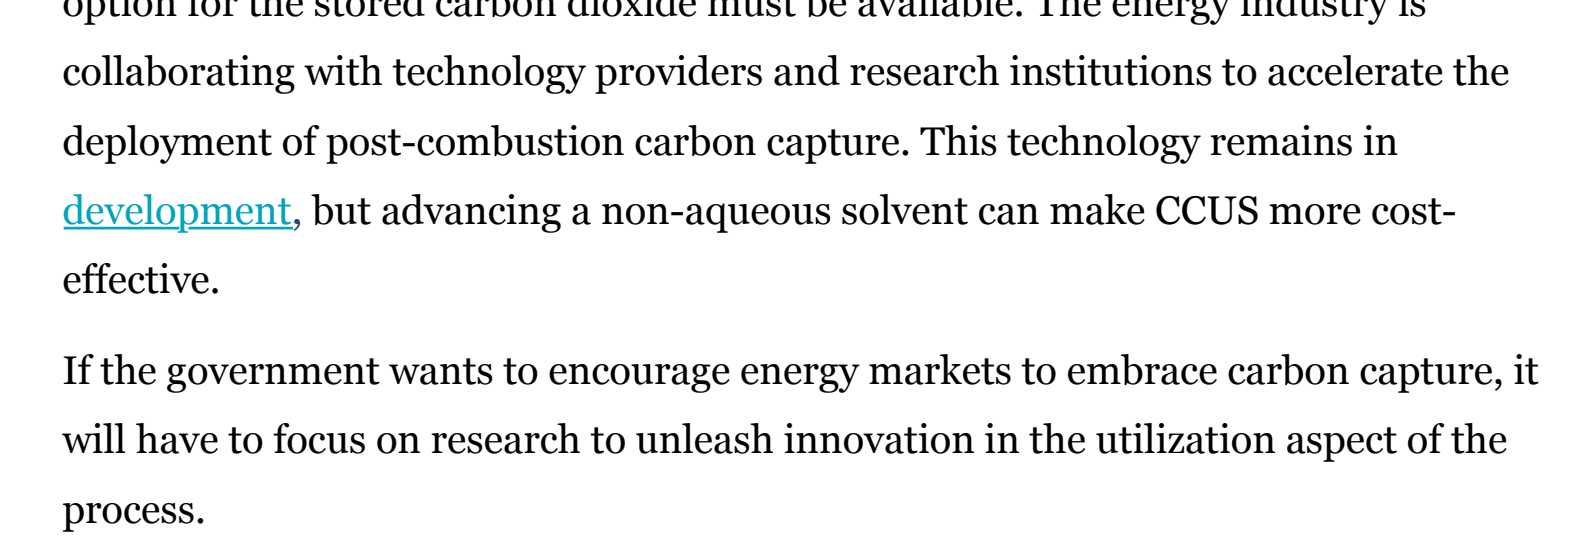

CCUS is a suite of technologies that enables the mitigation of carbon emissions from significant plant sources, such as refineries and power plants. The "U" part of CCUS is particularly important to the technology becoming cost-effective: after being transported, the CO₂ can be *utilized* as feedstock to extract hydrocarbons or create products; otherwise, it's stored over a mile underground. North America has led the deployment of carbon capture with [enhanced oil recovery](#) to increase the ability of oil to flow to an oil well.

Despite the push from environmentalists, carbon capture projects still aren't meeting expectations. Numerous high-profile [project failures](#), [high costs](#), slow technological innovation, overreliance on government support, and regulatory bottlenecks have all contributed to the relatively [flat](#) deployment of carbon capture projects.

The CCUS market is growing. The oil and natural gas carbon capture markets expect annual growth of 15% to [38%](#) between 2024 and 2032. Currently, they represent approximately [\\$166 billion](#) in investment opportunities globally.

For it to be successful, technology must be cost-effective, and a viable utilization option for the stored carbon dioxide must be available. The energy industry is collaborating with technology providers and research institutions to accelerate the deployment of post-combustion carbon capture. This technology remains in [development](#), but advancing a non-aqueous solvent can make CCUS more cost-effective.

If the government wants to encourage energy markets to embrace carbon capture, it will have to focus on research to unleash innovation in the utilization aspect of the process.

Strive to Boeing: Stop Putting DEI Over Safety

There's a new pilot at Boeing, and we want to make sure he's charting a shareholder-first course. Last week, Strive Corporate Governance EVP Justin Danhof wrote to Boeing's newly appointed CEO to urge him to return the company's focus to safety and performance, rather than pursuing value-destroying social goals. Should he do so, we're optimistic Boeing will once again be king of the skies.

Who Are We?

Strive is one of the fastest growing asset management firms. Our mission is to maximize value for our clients by leading companies to focus on excellence. [Click here](#) to learn more.

What Makes Strive Different?

While many asset managers push companies to focus on other stakeholders such as employees, suppliers, the environment and society at large, we live by a strict commitment to shareholder primacy — the belief that **the purpose of a for-profit corporation is to maximize long-run value for investors**. [Click here](#) to learn why shareholder primacy is so important.

How Does Strive Maximize Value?

Our [corporate governance](#) team engages with the companies in which our clients are invested to advocate for the pursuit of excellence in corporate America. We are aggressively apolitical when it comes to utilizing our corporate governance tools and demand that companies focus exclusively on delivering long-term financial value for investors. The corporate governance team also determines how to cast our shareholder votes at annual meetings and special elections, evaluating each proposal through the lens of maximizing financial return.

Our research team conducts deep analysis of macro economic trends, market developments, and industry- and company-specific metrics to identify potential risks and opportunities for our clients. We then incorporate the results of this research into our engagement and voting strategy, and share it with our clients in the form of white papers and market research reports so they can make the most educated investment decisions possible.
